DATE	TEAM ID	PROJECT NAME	MAXIMUM MARKS
29/09/2026	SWTID-2026-8965	Auto Ticket Classification using Flow Designer	2 Marks

Proposed Solution

1 Problem Statement (Problem to be solved)

S.NO. 1

School IT helpdesk staff manually classify incoming IT tickets based on the issue description. This is time-consuming and may lead to incorrect Category and Subcategory assignment.

2 Idea / Solution description

S.NO. 2

Develop a no-code **ServiceNow Flow Designer** solution that automatically analyzes keywords in the ticket's Short Description and assigns the appropriate Category and Subcategory. The system also sends an automated email confirmation to the caller.

3 Novelty / Uniqueness

S.NO. 3

The solution provides automated, keyword-based ticket classification using ServiceNow Flow Designer without requiring custom coding or a machine-learning model. It combines automatic classification, dependent Category/Subcategory assignment, and email notification in a single workflow.

4 Social Impact / Customer Satisfaction

S.NO. 4

Reduces repetitive manual work for IT helpdesk staff, improves consistency in ticket classification, reduces classification errors, and provides faster confirmation to ticket requesters.

5 Business Model (Revenue Model)

S.NO. 5

The solution can be implemented as an internal IT helpdesk automation system. It does not require a separate revenue model for the project; organizations can benefit through reduced manual effort, improved support efficiency, and lower operational costs.

6 Scalability of the Solution

S.NO. 6

The solution can be extended by adding new keywords, Categories, Subcategories, and classification rules. The Flow Designer workflow can be modified and expanded to support additional types of IT support requests as requirements grow.
