Empathy Map – Auto Ticket Classification using Flow Designer

Think & Feel

- Will the ticket be classified correctly automatically?
- I hope the system reduces manual work for IT staff.
- I want to make the process faster and more efficient.
- I feel responsible for helping users get quick support.
- I want to learn and improve my ServiceNow skills.

Hear

- Students and teachers report issues like Wi-Fi, projectors, passwords, slow systems.
- IT team says manual classification is time-consuming and error-prone.
- Users expect quick resolution and email confirmation.
- Guidelines/mentors suggest using Flow Designer for automation.

See

- Multiple tickets created daily with varying issue types.
- Users often use similar keywords (e.g., Wi-Fi, projector, password).
- Manual classification causes delays and inconsistent categorization.
- The ServiceNow platform provides Flow Designer, tables, and automation tools.

Say & Do

- “I need help with my Wi-Fi / projector / password issue.”
- Fills in the short description and creates a ticket.
- Expects an email confirmation after ticket creation.
- Checks if the ticket is categorized correctly.
- Uses ServiceNow features to build and test the flow.

Pain

- Manual review of each ticket is time-consuming.
- Risk of incorrect classification or delays.
- High volume of requests (especially during peak hours).
- Lack of automation leads to inconsistent routing and user dissatisfaction.

Gain

- Faster and accurate ticket classification.
- Reduced manual effort for IT agents.
- Improved routing efficiency and response time.
- Scalable, easy-to-maintain solution using Flow Designer.
