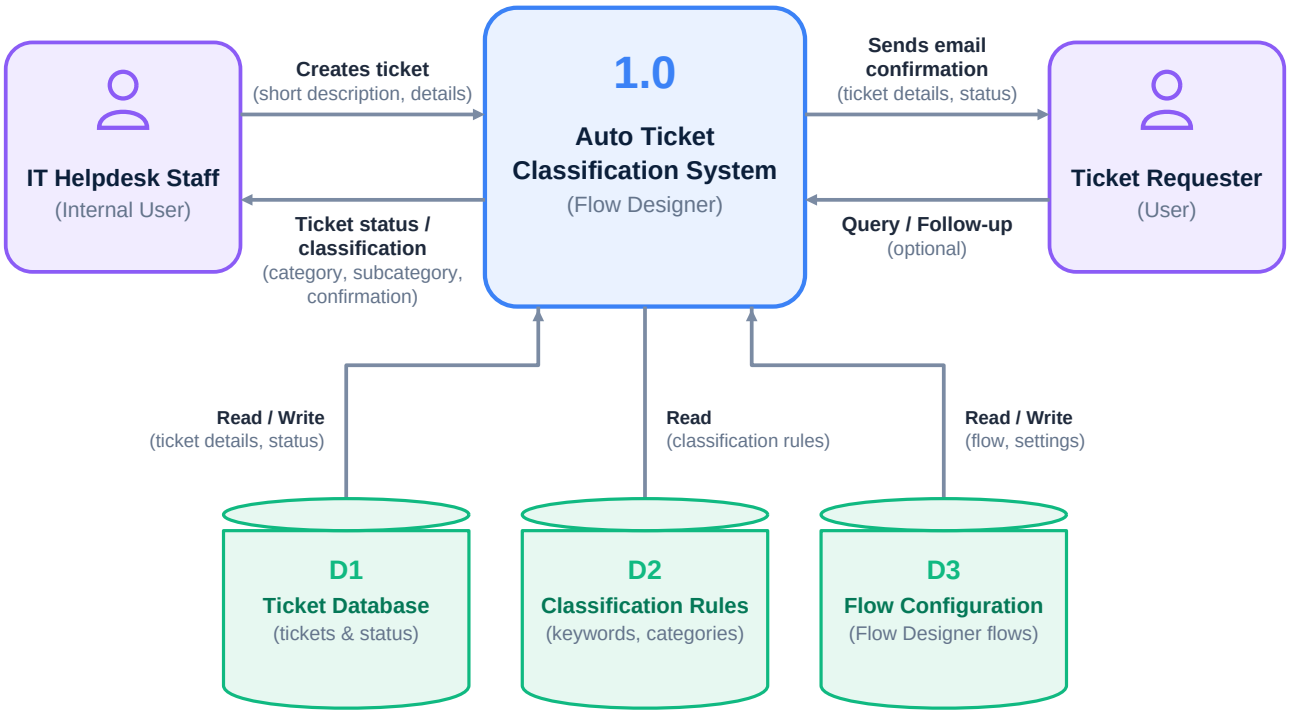
Data Flow Diagram

DATA FLOW DIAGRAM (DFD)

Auto Ticket Classification using Flow Designer

DFD Level 0 (Context Diagram)

Example: DFD Level 0 (Context Diagram)
Shows the overall system, external entities and the main data flow between them.



Main Data Flows:

1. User creates ticket → System
2. System reads rules & classifies → Database
3. System updates ticket → Database
4. System sends confirmation → User
5. System returns status → Helpdesk Staff

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
IT Helpdesk Staff	**Ticket Creation**	USN-1	As an IT helpdesk staff member, I can create an IT ticket by entering the caller and issue description.	I can create a ticket with the required caller and description details.	High	**Sprint-1**
IT Helpdesk Staff	**Automatic Classification**	USN-2	As an IT helpdesk staff member, I want the system to automatically classify a newly created ticket based on its issue description.	The ticket is automatically classified when it is created.	High	**Sprint-1**
IT Helpdesk Staff	**Category Assignment**	USN-3	As an IT helpdesk staff member, I want the system to automatically assign the correct category to the ticket.	The appropriate category such as Network, Hardware, Access, or Performance is assigned automatically.	High	**Sprint-1**
IT Helpdesk Staff	**Subcategory Assignment**	USN-4	As an IT helpdesk staff member, I want the system to automatically assign the appropriate subcategory based on the selected category.	The correct subcategory is assigned according to the category and issue type.	High	**Sprint-1**
Ticket Requester	**Email Notification**	USN-5	As a ticket requester, I want to receive an email confirmation after submitting an IT ticket.	I receive an automated email containing confirmation of my submitted request.	High	**Sprint-1**
IT Helpdesk Staff	**Ticket Management**	USN-6	As an IT helpdesk staff member, I want ticket information to be stored in a structured format so that I can manage support requests efficiently.	Ticket number, caller, category, subcategory, description, state, and assignment details are stored correctly.	Medium	**Sprint-2**
IT Helpdesk Administrator	**Flow Maintenance**	USN-7	As an administrator, I want to easily modify the classification rules and keywords when new types of IT issues are introduced.	I can update the flow conditions and classification rules without changing the overall application.	Medium	**Sprint-2**
IT Helpdesk Administrator	**Scalability**	USN-8	As an administrator, I want the classification flow to support additional ticket categories and subcategories in the future.	New categories, subcategories, and classification rules can be added when required.	Medium	**Sprint-2**
